# Checklist - Meto ENG-V2

## Pipe rail system

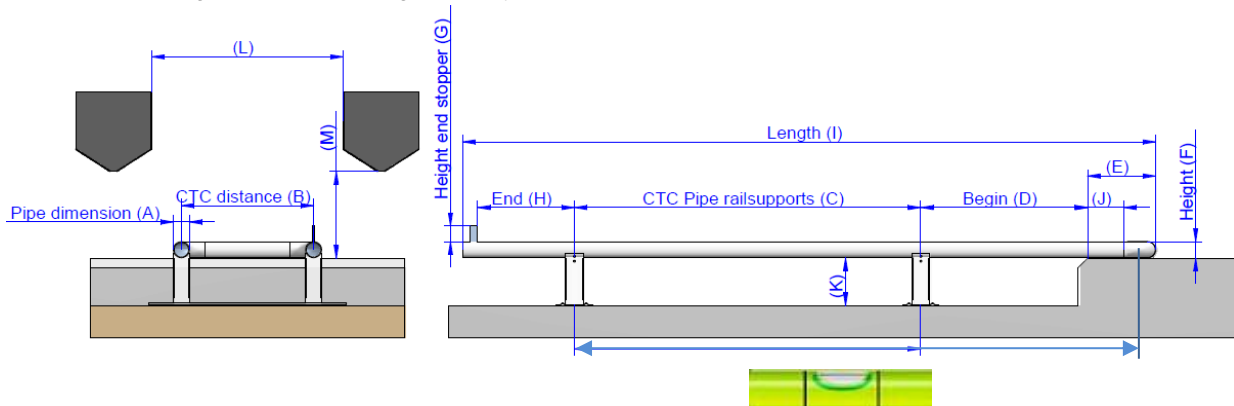

Mark

Pipe rail system:

Ou. = Outer flange  
In. = Inner flange

**Note:** - Contact Steenks Service when inner flange is needed, at some CTC sizes it is not possible!  
- In "Straight Pipe" outer flange is always preferred.

- |   |                                 |                                |
|---|---------------------------------|--------------------------------|
| Pipe dimensions (A)                                   | : Ø 45mm / 51mm / 60mm / Others | : . . . . .                    |
| Center to center size pipe rail system (B)            |                                 | : . . . . . cm.                |
| Pipe rail support distance (C)                        |                                 | : . . . . . cm. (max. 125 cm.) |
| 1° pipe rail support to pathway (D)                   |                                 | : . . . . . cm. (max. 100 cm.) |
| Pipe rail distance on pathway (E) (incl. bend)        |                                 | : . . . . . cm.                |
| Is the pipe rail fixed onto the pathway?              | Yes / No                        | (If yes take photo's)          |
| Height from concrete path up to top of the pipe (F)   |                                 | : . . . . . mm.                |
| Height end stopper (G)                                |                                 | : . . . . . mm. (min. 50mm.)   |
| Pipe rail distance last support to end pipe rail (H)  |                                 | : . . . . . cm. (max. 20cm.)   |
| Length pipe rail path (I)                             |                                 | : . . . . . m.                 |
| Pipe rail distance on pathway (J) (excl. bend)        |                                 | : . . . . . cm. (min. 5 cm.)   |
| Height pipe rail support (K)                          |                                 | : . . . . . cm.                |
| Width harvest path (L) between Crop or Climate system |                                 | : . . . . . cm.                |
| Height Crop or Climate system (M)                     |                                 | : . . . . . cm.                |

The rollers from the Meto are standard carried out with PU surface for the pipe rail and steel flange for the pathway.

**Note:** The Meto is designed for a pipe rail system with a maximum slope of 2°. Moreover, the pipe (at least to 2nd support) must be level with respect to the concrete path for moving along the pipe.
