

# METO

## TRANSPORT TROLLEY

The Meto transport trolley is designed to spray fully automatically with a Meto spray trolley. The transport trolley moves the spray trolley automatically from aisle to aisle without needing an operator and will again send the spray trolley automatically to the new aisle to be sprayed. You can precisely configure which aisles you wish to spray or which aisles you definitely wish to skip on the touch screen. A reel has been installed on the transport trolley for the supply hose so that you only have to turn around the transport trolley at the end of the greenhouse to be able to come back while spraying. The transport trolley is equipped with a fault sensor that will specify exactly what the cause of the fault is.

### Benefits:

- Excellent price/quality ratio
- Saves on labour costs
- Simple control and user-friendly
- Provide crop protection fully automatically
- Can be used with an existing Meto spray trolley

### Technical specifications\*

#### Properties

Dimensions (L x W x H)	180 x 140 x 225 cm
Deadweight	450 kg
Motor power	0.37 KW
Traction batteries	24 V 118 AH
Can be supplied with an SMS fault sensor	
Suitable for head or vane running gears
