

TRON 3300

DUST/WATER VACUUM CLEANER

The Tron 3300 dust/water vacuum cleaner is suitable for suctioning both dust and water. It is supplied complete with steel and plastic suction pipes including different attachments for water and dust. If you wish to suction dust, position the dust filter in the vacuum tank, which will ensure that all the suction dust will be deposited directly in the 70 l waste tank. If you wish to suction water, remove the dust filter and complete the job. The machine is equipped with a floater and, therefore, it will stop working when the tank is full. If the water tank is full, you can drain it with the drainage hose at the discharge pit or you can tip back the whole of the tank so that it is emptied in one go.

Benefits:

- Excellent price/quality ratio
- Saves on labour costs
- Simple control and user-friendly
- Can be used for dust and water

Technical specifications*

Properties

3 suction motors	with a total of 4.5 HP
Drainage hose for the discharge of dirty water	
Suction hose length	2.5 m
Suction hose	40 mm diameter
Tank contents	70 l
Voltage	230 V 50 Hz
Dimensions (L x W x H)	60 x 60 x 105 cm
Deadweight	25 kg
Tilting mechanism to empty the waste tank	
Individual attachment cassette for alternating between dust and water
