Strapping technologies

Mobile strapping machine with corner applicator

Reisopack

The mobile Reisopack with corner applicator is a fully automatic strapping machine that will also position the corner boards around the pallet. The greatest benefit of this mobile strapping machine is that you can have a pallet strapped and, in the meantime, fetch the next pallet to have that one strapped. The machine can be supplied with 3 or 4 pallet locations so that you always have a stock of pallets that can be strapped. There are control posts on the floor where you can select the application for both with and without corner boards and the number of straps per pallet.

Benefits:

- Excellent price/quality ratio
- Saves on labour costs
- Simple control and user-friendly
- You never have to wait until the pallet has been strapped
- Fully automatic machine

Properties:

- With 4 pallet locations as standard
- With 4 application selection posts on the floor
- With 4 steel approach angles for the pallet position
- A remote control can be used
- Dimensions and options in consultation

10/04 Edition · We reserve the right to made any modification without prevention.
